

W3Partnership will review your IBM Software Licenses, ensuring no compliance issues and drive efficiencies across your IBM Software portfolio.

The Objectives

Review: To review the application estate in relation to the IBM SW purchased and identify duplication of licenses.

Feasibility: To explore the use of licenses for development, test, production and disaster recovery, and establish the feasibility of any license rationalisation.

Plan: To create a plan to establish interdependencies and licensing options of the application estate.

The Approach

Context: Establish the context and scope of the current IBM software licensing application landscape, along with short and long-term objectives, goals and known issues.

Analysis: Review the IBM software application estate against specified business processes to identify the extent of any potential duplication or contradiction of functionality.

Recommendations: W3 Partnership will present a report of feasibility and desirability for removal of specified components of IBM software licenses and recommendations for purchasing support and/or additional licenses (e.g. floating user /sub capacity pricing or off premises software as a service). The report contains options (where relevant) and prioritised recommendations along with a comprehensive action plan for implementation.

Key Issues

- IBM software license compliance
- License renewal
- Different licensing options

Benefits

- Possible reduction in licensing costs
- Full understanding of what the licensing implications are for your architecture.
- IBM approved partner

Deliverables

- Report on your current IBM license estate
- Verify license compliance
- Recommendation for optimising your licenses.

W3 Partnership uniquely provides solutions and services that help organisations make sense of their digital applications and services, through integrated platforms and patterns. We are in a position to design, develop, host, manage and monitor such platforms.
